THE
ENTOMOLOGICAL SOCIETY
OF WASHINGTON
ORGANIZED MARCH 12, 1884

OFFICERS FOR 1990

JEFFREY R. ALDRICH, President
DAVID R. SMITH, President-Elect
RICHARD G. ROBBINS, Recording Secretary
HOLLIS B. WILLIAMS, Corresponding Secretary
JAMES B. STRIBLING, Custodian

NORMAN E. WOODLEY, Treasurer
GARY STECK, Program Chairman
GEOFFREY B. WHITE, Membership Chairman
F. CHRISTIAN THOMPSON, Past President

ROBERT D. GORDON, Editor
THOMAS J. HENRY, Associate Editor

Publications Committee
DONALD R. DAVIS
DONALD R. WHITEHEAD
F. CHRISTIAN THOMPSON

HONORARY PRESIDENT
CURTIS W. SABROSKY

HONORARY MEMBERS
LOUISE M. RUSSELL
ALAN STONE
THEODORE L. BISSELL

All correspondence concerning Society business should be mailed to the appropriate officer at the following address: Entomological Society of Washington. % Department of Entomology, NHB 168, Smithsonian Institution, Washington, D.C. 20560.

MEETINGS.—Regular meetings of the Society are held in the Natural History Building, Smithsonian Institution, on the first Thursday of each month from October to June, inclusive, at 8 P.M. Minutes of meetings are published regularly in the Proceedings.

MEMBERSHIP.—Members shall be persons who have demonstrated interest in the science of entomology. Annual dues for members are $20.00 (U.S. currency) of which $18.00 is for a subscription to the Proceedings of the Entomological Society of Washington for one year.

PROCEEDINGS.—The Proceedings are published quarterly beginning in January by The Entomological Society of Washington, % Department of Entomology, NHB-168, Smithsonian Institution, Washington, D.C. Members in good standing receive the Proceedings of the Entomological Society of Washington. Nonmember subscriptions are $50.00 per year, domestic, and $60.00 per year, foreign (U.S. currency), payable in advance. Foreign delivery cannot be guaranteed. All remittances should be made payable to The Entomological Society of Washington.

The Society does not exchange its publications for those of other societies.

PLEASE SEE P. 318 OF THE APRIL, 1989 ISSUE FOR INFORMATION REGARDING PREPARATION OF MANUSCRIPTS.

STATEMENT OF OWNERSHIP

Title of Publication: Proceedings of the Entomological Society of Washington.
Frequency of Issue: Quarterly (January, April, July, October).
Location of Office of Publication, Business Office of Publisher and Owner: The Entomological Society of Washington, % Department of Entomology, Smithsonian Institution, 10th and Constitution NW, Washington, D.C. 20560.

Editor: Robert D. Gordon, Systematic Entomology Laboratory, ARS, % Department of Entomology, Smithsonian Institution, 10th and Constitution NW, Washington, D.C. 20560.

Managing Editor and Known Bondholders or other Security Holders: none.

This issue was mailed 1 May 1990
Second Class Postage Paid at Washington, D.C. and additional mailing office.

A SURVEY OF THE COCCINELLIDAE (COLEOPTERA) ASSOCIATED WITH NURSERY STOCK IN MARYLAND

C. L. Staines, Jr., M. J. Rothschild, and R. B. Trumbule

Maryland Department of Agriculture, Office of Plant Industries and Resource Conservation, Plant Protection Section, 50 Harry S Truman Parkway, Annapolis, Maryland 21401.

Abstract.—Twenty-eight species of adult Coccinellidae were collected in Maryland nurseries from 1986 to 1988. Host plants, presence of prey, and active predation (if any) were recorded for each species. The most commonly detected species were Coccinella septempunctata L., Coleomegilla maculata lengi Timberlake, and Hippodamia convergens Guérin. Coccinellidae populations were seldom high and the number of times beetles were collected was low compared to the number of nurseries visited.

Key Words: host plants, prey

Recently there has been a shift in the pest control practices of commercial nurseries away from cover sprays to spot spraying. Under this new regime, pest control by natural enemies is both desirable and feasible. The Coccinellidae have long been known as major predators of various Homoptera and Acari. Gordon's (1985) treatise on North American Coccinellidae has facilitated adult identification to species. A survey of the Coccinellidae found in Maryland nurseries was undertaken to determine the variety of species present, their frequency of occurrence, and abundances.

Materials and Methods

Adult Coccinellidae were collected during routine nursery inspections. In addition to the typical collection data, host plants, presence and type of prey, and feeding activity by the coccinellids were also noted. Specimens were placed in 70% ethyl alcohol and taken to the laboratory for mounting. Adults were identified by the senior author using Gordon (1985). No efforts were made to identify larvae. Voucher specimens are deposited in the Maryland Department of Agriculture collection.

Results and Discussion

Twenty-eight species representing eighteen genera were collected. Coccinellidae were found in 67 locations in 1986, 82 locations in 1987, and 37 locations in 1988. One reason for the low detection rate in 1988 is that several field personnel only reported unusual coccinellids. Possibly another reason was that the drought conditions and high temperatures during the summer made most adult coccinellids seek protected locations. Prey numbers were also low, possibly due to the same conditions.

Four species were found in high numbers, but most were observed as occasional adults scattered over large areas. The species found are listed below with the counties, host plants (names as listed in Hortus III, 1976), prey associations or feeding activities, and the months in which specimens were collected. The relative frequency of each species is indicated.
SCYMNIINAE
Scymnini

Hyperaspiini
Brachicentus felina (Fab.): Montgomery. Prince George’s. Betula sp., Malus sp. Associated with aphids. May, June, August. Four locations.
B. quadripunctata quadripunctata (Melsheimer): Prince George’s. May. One specimen.
B. ursina (Fab.): Baltimore. June. One specimen.

CHILOCORINAE
Chilocorini
Chilocorus kuwanae Silvestri: Specimens of this species were released against various Diaspididae. Recoveries were made in Prince George’s and Worcester. Ilex cor-
C. stigma (Say): Baltimore, Carroll, Howard, Kent, Montgomery, Prince George’s, St. Mary’s. Acer sp., A. palatium Thunb., Euonymus alata (Thunb.) Sieb., Fraxinus sp., Prunus sp., Quercus sp., Q. palustris Muench., Q. robur L. Associated with Lepidosaphes yangagicolica Kuwana, M. obscura, Pseudaulacaspis sp. (Diaspididae). Eulecanium cerasorum (Cockerell) (Coccidae). March. April. May, June, July, September, November. Nineteen locations. This species was common in only one location. All other collections represent only a few individuals.
Exochomus marginipennis (LeConte): Kent, St. Mary’s. Robinia pseudoacacia. May, November. Two specimens.

COCCIDULINAE
Coccidulini
Rhyzobius lophanthae (Blasidell): Montgomery. Pinus sp. October. One specimen.

COCCINELLINAE
Coccinellini
Anatis labiculata (Say): Anne Arundel, Baltimore, Carroll, Howard, Montgomery,

*A. mali* (Say): Harford, Prince George's. *Pinus sylvestris* L. May. Two specimens.

*Coccinella novemnotata* Herbst: Allegany, Carroll. June, July. Two locations. This species used to be very common in Maryland, judging by the number of specimens in student collections at the University of Maryland and observations by the senior author. Since the introduction of *C. septempunctata* L., the species has only been collected twice in 1986. Whether this is due to a natural decline or competitive displacement is not known at present.

*C. septempunctata* L.: Allegany, Anne Arundel, Baltimore, Carroll, Charles, Frederick, Harford, Howard, Kent, Montgomery, Prince George's, Queen Anne's, Somerset. St. Mary's, Talbot, Wicomico, Worcester. *Acer saccharum*, *Betula* sp., *Crategus* sp., *Elageanus umbellata*, *Euonymus* sp., *Fraxinus* sp., *Hemerocallis* sp., *Ilex cornuta* Lindl. & Paxt., *Juniperus* sp., *Malus* sp., *Pieris japonica* (Thunb). D. Don, *Pinus* sp., *P. sylvestris* L., *P. thunbergiana* Franco, *Prunus* sp., *Pyracantha* sp., *Pyrus calleryana* Decne., *Rhododendron* sp., *Rosa* sp., *Quercus* sp., *Q. robur*, *Spirea* sp., *Taxus* sp., *Tilia* sp., *Tsuga canadensis*, *Viburnum* sp., *Wisteria* sp., *Zelkova serrata* (Thunb.) Makino. March, April, May, June, July, August, September, October, November. This was the most commonly collected species in the survey (87 locations). Feeding on aphids. *Coccinella septempunctata* was taken in large numbers on several occasions. On three separate occasions adult *C. septempunctata* were collected on the bark of cut Christmas trees of *Picea abies*, *P. pungens* Engelm., and *Pinus sylvestris*. The origin of these trees was eastern Pennsylvania. The movement of cut Christmas trees provides an interesting method of distribution for this species. This species has also been collected in a greenhouse complex.

*Coleomegilla maculata* lengi Timberlake: Anne Arundel, Baltimore, Caroline, Carroll, Kent, Prince George's, Queen Anne's, St. Mary's, Somerset, Talbot, Wicomico, Worcester. *Acer rubrum*, *Coreopsis* sp., *Euonymus alata*, *E. japontica* Thunb., *Forsythia* intermedia, *Gleditsia triacanthos*, *Hedera helix* L., *Hibiscus* sp., *Ilex crenata*, *I. opaca* Ait., *Juglans* sp., *Magnolia* sp., *Phlox* sp., *Pinus* sp., *P. sylvestris*, *Prunus* sp., *Pyraconathra* sp., *Rosa* sp., *R. rugosa*, *Quercus* sp., *Salix* sp., *Spirea* sp., *Taxis* sp., *Tsuga canadensis*, *Vitis* sp., *Z. serrata*. Feeding on aphids; associated with *Pinus strobi* (Hartig) (Homoportica: Phylloxeridae) and *Dymecoccus wisteriae* (Green) (Pseudococidae). April, May, June, July, August. This was the second most common species in this survey (45 locations).

This was the third most common species collected (39 locations).

*H. glacialis* (Fab.): Kent, Somerset. July. Two locations.

**Psylloborini**

**Acknowledgments**

We would like to thank K. M. Berry, S. M. Bohlen, T. S. Creel, J. Fishback, K. Hogsten, D. C. Laughlin, L. C. Miles, S. C. Parry, J. P. Smokonich, S. J. Stevenson, J. A. Wolinski, and M. E. Zastrow for their assistance in collecting specimens in the field.

We thank J. J. Drea, R. M. Hendrickson, and the rest of the staff of the Beneficial Insects Lab, USDA for supplying the *Chilocorus kuwanae* released in Maryland nurseries.

W. F. Gimpel, Jr., Maryland Department of Agriculture, and J. A. Davidson, University of Maryland, commented on earlier drafts of this manuscript.

Maryland Department of Agriculture Contribution Number 60-89.
