

On the synonymy of *Dryodurgades dlabolai* Wagner (Homoptera: Cicadellidae: Agalliinae)

V.M. Gnezdilov

Gnezdilov, V.M. 2007. On the synonymy of *Dryodurgades dlabolai* Wagner (Homoptera: Cicadellidae: Agalliinae). *Zoosystematica Rossica*, **16**(2): 176.

Dryodurgades indicensis Gnezdilov, 1997 is placed in synonymy under *D. dlabolai* Wagner, 1963.

V.M. Gnezdilov, Zoological Institute, Russian Academy of Sciences, Universitetskaya nab. 1, 199034 St. Petersburg, Russia. E-mail: hemipt@zin.ru

During a study of the Auchenorrhyncha collection of Museum National d'Histoire Naturelle (Paris, France), specimens of *Dryodurgades dlabolai* Wagner, 1963, including a topotype from Simontornya (Hungary), were examined. The study showed that *D. indicensis* Gnezdilov, 1997 described from the Caucasus is a junior synonym of *D. dlabolai*, according to the structure of aedeagus, which has bifurcate apical processes with internal tooth on each upper branch (Gnezdilov, 1997, figs 10, 11). The original figures by Wagner (1963, figs 2a, 2b) are incorrect. Wagner figured the teeth of the upper aedeagal branches as external.

Dryodurgades dlabolai Wagner, 1963

Dryodurgades dlabolai Wagner, 1963: 426.

Dryodurgades indicensis Gnezdilov, 1997: 91, **syn. n.**

Material examined. **Hungary:** 1 ♂, Simontornya, Ujhe-lyi. **Serbia:** 1 ♂, Kopaonik, Šanac, Kojenje, 19.VI.1954.

Acknowledgements

The study was made with a Museum National d'Histoire Naturelle grant 2007 for invited scientists.
